

REMOTE GENERATOR MONITORING SYSTEM

The Nova Remote Monitoring System actively monitors location and status of general conditions of generators. It provides active alerts via email covering real time information and reports, including but not limited to current and historical fuel levels, current battery levels, hours of run time, average fuel used over given time and more.

COLLECT, CONNECT AND ACCESS FROM ANYWHERE AT ANYTIME

- Real Time alerts and reports
- Location and Movement alerts
- Fuel and Battery Levels and hours of use alerts
- Cloud based access from anywhere

The hardware can include solar charging to ensure the starter battery stays charged, an ultrasonic fuel sensor and rugged, and weatherized data collection transponder.

Our software monitors multiple conditions and has immediate access to the most critical information.
