

INVENTORY MANAGEMENT

Nova Inventory Management uses small radio frequency identification devices for identification and tracking purposes.

Enhances asset management, reduces operating expenses and increases higher revenues and/or margins.

The system includes a tag (transponder), a read/write device, and a host system application for data collection, processing and transmission.

RFID tags can be read through a variety of substances, e.g. snow, fog, ice, paint, dirt, and they can read at remarkable speed even in difficult conditions. They work contactlessly and require no line of sight.

Benefits

- Multiple uses for any type of assets
- Lower inventory stock levels
- Reduce waste, handling and logistics costs
- Improve order fill rates
